Bring Your Key Control Into the 21st Century

EDUCATION

Universities, hospitals, and educational organizations pride themselves on being at the cutting edge of research and technological development. Unfortunately, the same can't always be said for key control technology on many campuses.

Pegboards, large key rings, and manual paper access logs are the status quo of key management, but such methods are dated, leaving campuses unsafe and unsecure — which can have serious consequences.

KeyTrak drawers automatically track who accessed keys and when, and can be used to secure and track large volumes of keys, such as in campus housing.

The KeyTrak Guardian physically locks down and manages keys to sensitive areas or assets, including campus law enforcement fleet vehicles.

Lost master keys often result in thousands of dollars in rekeying costs. Meanwhile, students, staff, or outside vendors could use stolen or improperly loaned keys to access university assets, steal exam answers, or burglarize student apartments.

Do your key control practices represent your organization's goals? Are you doing enough to keep students and staff safe? It's time to bring your key control into the 21st century.

Visit us at keytrak.com/campus-safety-2020 for a checklist on how to select the right key control vendor for you.
