

# KeyTrak System Overview

## The Right Size for Any Business

The KeyTrak system gives users an effective and efficient way to control keys and assets. With multiple drawer sizes and system configurations, KeyTrak can meet the needs of your business, no matter the size.

Basic KeyTrak drawers are available with slots for 96, 144, 156, or 240 key tags and can be networked together to secure more than 5,000 keys with one system.

Built with solid steel components and unique design features, KeyTrak drawers limit access to only authorized users who log in through the connected server.

The system uses iButton technology to automatically track every time a key is taken or returned to make the checkout process quick and easy. This also gives system administrators a verifiable audit trail of key activity, preventing mistakes common with manual access logs and ensuring keys are where they're supposed to be.

## Benefits

- Secure keys in metal drawers.
- Restrict access to authorized users.
- Track key activity automatically.
- Receive alerts for invalid login attempts, overdue keys, keys out, power outages, etc.
- Perform key audits in seconds rather than days.
- Reduce liability risks and key or lock replacement costs.
- Manage systems remotely with dedicated software.
- Evolve and expand your system with more drawers as needed.

*When a key is checked out from the system, the drawer opens and the requested key tag is illuminated with a red light.*
