

Integrating School Safety for Today's Changing World

Meerkat Safe is a school safety solution developed in collaboration with experts from the education, and security fields. It is a wholistic safety solution that utilizes an innovation combination of software, hardware, and integration into your existing systems to ensure your organization has clear visibility of all people, areas, and assets in real time. Our unique mapping solution allows you a single pane of glass to monitor all of your systems overlaid on a custom 3-D map of your facility; easily see not only tracking information, but also cameras, access control, alarms, and environmental sensors from a single scree view.

“Meerkat Safe has created a user-friendly and customizable safety communication platform that is practical and effective both for daily use and for emergency application.”

Dr. Chris Houston
Superintendent
Greene County Schools, GA
