

## Campus Safety

### ARE YOU PREPARED?

PUBLIC ADDRESS

INTERCOM

PAGING

MASS NOTIFICATION

EMERGENCY NOTIFICATION

DISTRICT WIDE PAGING

DIGITAL SIGNAGE

SYNCHRONIZED CLOCKS

We can't prevent a crisis situation from happening in our schools but we can help you know the situation is present, inform those around you, and confirm they have taken action.

We will analyze the current technology you have in place and cost-effectively design a solution that will enhance your day-to-day and emergency plans.

Manage public address, intercom, mass notification, district-wide paging, bell schedules, event drills, digital signage and synchronized clocks from a user-friendly graphical interface.

*The addition of the Telecor equipment significantly upgraded our school's safety and operations efficiency and the system is operating as needed. I would recommend the Telecor system as part of any school or district's day-to-day operations and emergency plan.*

# Visual Console

Visual Console™ integrates the functionality of a console into the dynamic framework of a PC. By utilizing an easy-to-use graphical interface, emergency operations, routine call processing, paging, audio program distribution and bell scheduling are all simplified through this Windows®-based application

Leveraging your existing CCTV security camera system, integrate Visual Console to activate camera pop ups when someone is calling in for entry from a key access point.

## VuAlert

VuAlert is a communications platform that displays routine information, emergency alerts and synchronized time on full-color HDTV screens.

Current time is shown in either digital or analog format which is synchronized to a cloud-based management portal. Displays receive local live weather and severe weather alerts from the National Weather Service.

Emergency alarms from Telecor's network based eSeries and T2/XL analog communications systems can be integrated into VuAlert. This provides a comprehensive network to broadcast both visual and audio notifications for any facility.

## Master Clock & Message Host

The Master Clock & Message Host (eMH) incorporates customizable tones, pre-recorded audio files and textual messages which can be activated automatically by schedules and broadcast to eSeries devices.

It incorporates a browser-based GUI that allows users to connect from anywhere using PCs, smart phones and tablets to manage their school schedules.

In emergency situations, the eMH provides the ability to manage emergency response operations in your facility on-site or remotely.
